EMERGENCY CARE COST
Crisis in Texas

Across the nation states are experiencing a serious market failure in emergency care and perhaps nowhere greater is that crisis than in Texas.

Texas is GROUND ZERO for High ER Bills, Surprise Bills and Out-of-Network ER Care:

- Some of the highest rates of out-of-network ER physicians: 50% of ER physician claims are out of network
- Some of the highest rates of surprise billing in the U.S. – McAllen, TX has seen 89% surprise billing rates
- Some of the highest emergency care costs: Texas ER spending by a major health plan is 67% more expensive than the rest of the nation
- The average ER facility charge in Texas is 36% higher than the rest of the country
- Highest rates of freestanding ERs: Over 200 FSERs in Texas – more than half nation’s total population of freestanding ERs
- Double digit growth in ER costs per year (over 12%)
- Texans use emergency departments 22% more than the rest of the country

In 2014, Nearly 1 in 5 Inpatient Admissions to an ER Resulted in a Surprise Bill. The Texas Frequency is Much Higher!

The likelihood of receiving a surprise bill from an ER visit:

- An inpatient visit to an emergency department
  - U.S. 20%
  - Texas 34%
- An outpatient visit to an emergency department
  - U.S. 14%
  - Texas 27%
- An elective inpatient admission
  - U.S. 9%
  - Texas 16%
- An out-of-network ambulance ride
  - U.S. 51%
  - Texas 72%

Nationwide, about 1 in 5 inpatient admissions to an emergency department led to a surprise bill in 2014 and roughly 5% were because an ambulance took the patient to an out-of-network hospital. The frequency in Texas was MUCH HIGHER than the national average.

Solutions to Address the Emergency Care Crisis

The growing occurrence of exorbitant surprise medical bills and out-of-network ER care in Texas is the direct result of a serious market failure in emergency care. Expanding the use of mediation for consumers, boosting transparency at freestanding ERs, holding bad actors accountable, and keeping the government out of the price-setting business are the keys to achieving private-market solutions to emergency care cost crisis in Texas.

Educate Texans with accurate information: Increase cost transparency and network status at freestanding ERs.

Expand surprise billing protections for consumers to all freestanding ERs.

Hold bad actors accountable for exploiting patients through misleading advertising and exorbitant pricing.
Mediation is limited but working in Texas and should be expanded to all emergency care.

Seeking ER Care in Texas: Out of Network & Out of Luck

Out of 300 In-network Hospitals there are ZERO In-network ER Doctors Available!

$6 Million in Surprise Medical Bills Challenged

$5 Million in Consumer Savings Achieved Through Mediation of Surprise Medical Bills

$750,000 in Additional Insurer Payments to Providers

Note: A “balance bill” is the second bill a consumer receives from an out-of-network provider. These often come as a surprise to the consumer who has already paid the coinsurance and copay. Since 2015, consumers have challenged $6M in surprise medical bills through mediation. Through this process, consumers saved more than $5M in expensive surprise medical bills, and insurers were required to pay an additional $750K to providers, which is only 12.5 percent of the total amount of surprise bills that consumers challenged. Mediation is working, but is limited. Under current law, there is no mediation protection for freestanding ERs. Mediation needs to be expanded to all emergency care including FSERs.

Every 2 Years 250,000 Texas Patients Get Surprise Medical Bills

Freestanding ERs: Buyer Beware!

Current law gives Texans no protections against surprise bills and exorbitant bills at freestanding ERs

Freestanding ERs (FSERs) Look like urgent care centers, but may charge **10X MORE** than urgent care centers and **2X MORE** than a traditional hospital-based ER

**They're expensive • They mislead patients • They are likely not in your health plan network – by choice**

Lucrative new business model that may only need to see 12 patients a day to turn a profit

Texas is **GROUND ZERO** – more than 200 FSERs call Texas home – that's more than half of the nation's total population of FSERs

**10X**
Service costs are ten times that of Urgent Care

**75%**
Overlap in services between FSERs and Urgent Care Centers

**TOP 5**
TOP 5 reasons people visit an FSER are for fever, bronchitis, sore throat, upper respiratory infection, and cough. All could easily be treated at urgent care of a doctor's office.

**50%**
of FSERs in the U.S. are in Texas

**3X**
Freestanding ERs in Texas have nearly 3x more ancillary costs (Lab & Path, Radiology) for the same diagnoses codes than hospital-based ERs

---

Freestanding ERs – More Expensive Than Urgent Care & Traditional ER

**Freestanding ERs Charge $3K For A Cough?!?!**

There is nothing "free" about your neighborhood freestanding ER. Freestanding ERs charge up to 10X more than urgent care centers for the same services.

Freestanding ER Web Sites Intentionally Mislead Consumers, Telling Them: “We Accept Your Insurance”

Many Texas freestanding ER web sites use intentionally confusing language to mislead consumers into believe they are in-network with their insurance plans. “We accept all insurance” is NOT the same as “we are in your network.”

Real Example of Misleading Advertising on a Texas Freestanding ER Web Site.

“All Health Insurance Plans Accepted. We honor in-network billing for all private health insurance plans including: Aetna, UnitedHealth, Humana, Cigna, and Blue Cross Blue Shield.”

Independent Freestanding ERs are Chronically Out of Network

Texas Out of Network Emergency Facility Claims: 2015

2015 Texas ER Facility Claims: Network vs. Out of Network

Network 89%
Out of Network 11%

Hospital ER 31%
Freestanding ER 69%

TAHP Out-of-Network Claims Survey and Analysis of Three Large Texas Health Plans: 2015 Claims; May 2016

Freestanding ERs are responsible for nearly 70% of out-of-network ER facility claims in Texas.
